UTeach at 20
45 Universities. 21 States. 7,000 Students. 3,300 Graduates.
We Prepare Teachers. They Change the World.
UTeach is . . .

20 years old! UTeach began at The University of Texas at Austin in 1997.

A unique way to prepare teachers. UTeach is transforming how universities recruit and develop secondary science, math, engineering, and computer science teachers in the U.S.

Well tested. UTeach has been developed over two decades and successfully implemented at 45 universities in 21 states and the District of Columbia.

Collaborative. UTeach is a collaboration between faculty in the colleges of education and science and between research faculty and clinical faculty (former K–12 teachers) who work side by side to support student development.

Designed specifically for STEM majors. UTeach students earn rigorous STEM degrees along with teaching certification without requiring additional costs or time at the university. UTeach curriculum is streamlined and focused exclusively on STEM teaching and learning.

Grounded in inquiry. UTeach students are prepared to implement inquiry- and project-based instructional approaches.

Clinically intensive preparation. UTeach provides field teaching experiences to prospective teachers as early as their freshman year and continuously throughout their preparation. UTeach continues to provide induction support for new graduates teaching in schools.

“
When I transferred here and heard about this program, I thought, ‘Perfect! I don’t have to choose between my STEM major and teaching. I can do both!’

Student,

The UTeach effect

We produce more university-prepared teachers. UTeach establishes permanent, robust STEM teacher certification programs that prepare more teachers at partner universities. Since 1997, UTeach programs have produced more than 3,300 graduates.

We attract a different kind of teacher. UTeach recruits students from all STEM disciplines and successfully attracts students to teaching who might not have considered it otherwise.

UTeach teachers stay in teaching. 86% of UTeach graduates enter teaching and 86% of those who entered are currently teaching.

UTeach teachers are in demand. UTeach graduates are highly sought after by the districts where they have been trained. Their strong content knowledge and experience implementing inquiry- and project-based instructional methods make them highly desirable first-year teachers.

“
The program is really preparing students in content areas that are highly underrepresented in our community. They’re advocates for pushing students into STEM careers, STEM fields. Their eagerness and enthusiasm for teaching the subject is really reflected in what they do every day.

Ahna Gomez,
Irving High School Principal,
Irving, Texas

Students pursuing math and science degrees at our nation’s universities represent the single best pool from which to recruit and prepare excellent STEM teachers.
UTeach is a community

The national community of UTeach programs includes more than 700 STEM and STEM Education faculty at 45 partner universities across the United States. The UTeach program model is continuously improved under the scrutiny of this network of experts, all working to improve STEM teaching and learning.

The National UTeach Alumni Network is devoted to supporting the STEM teachers who have graduated from UTeach programs at universities across the country. As UTeach Nation continues to grow, the National UTeach Alumni Network will be there to support graduates’ continued professional development.

The UTeach STEM Educators Association (USEA) brings individuals and organizations together to promote excellence in STEM teaching through educator preparation, professional learning, and leadership development programs.

That knowledge base and the support system I had with UTeach really helped me feel successful during my first year [of teaching] and learn a lot more than I could have otherwise.

William Kiker, UTeach Alumnus and Mathematics Teacher, Liberal Arts and Sciences Academy, Austin, Texas

The best way to find out if teaching is right for you is to get into a classroom and try it out. Learning by doing is my mantra; I firmly believe we learn best when we are given opportunities to engage in first-hand experiences.

Jan Smith, Master Teacher, IDoTeach, Boise State University
